

TikTok GLOBAL ADS INTEGRITY

RISK ANALYSIS

The **TikTok Global Ads Integrity Control Panel** neutralizes ad fraud and strict EU DSA regulatory exposure while bridging critical cloud-ringfence data gaps (USDS_JV vs. GLOBAL_CORE).

It leverages three high-impact KPIs—**Total Ad Capital Exposure (\$10.01M)**, **Ecosystem Scam Rate (3.44%)**, and **Linguistic Threat Density Index (1.0276)**—to quantify immediate risks.

Operational defense assets, including **Geo-Mapping for fraud hotspots**, **Network Fraud Metrics targeting botnets** (e.g., 32.02% Pangle network anomaly), and a **Regulatory Compliance Table for real-time enforcement**, enable trust and safety teams to proactively mitigate threats and prevent severe DSA fines.

Total Ad Capital Exposure

\$10.01M

This KPI quantifies the total advertiser capital at risk due to fraudulent activities, highlighting the direct financial impact of ad fraud and policy violations.

Ecosystem Scam Rate

3.44%

This metric reveals the percentage of the ad ecosystem compromised by scams, indicating the overall health of ad moderation and policy enforcement.

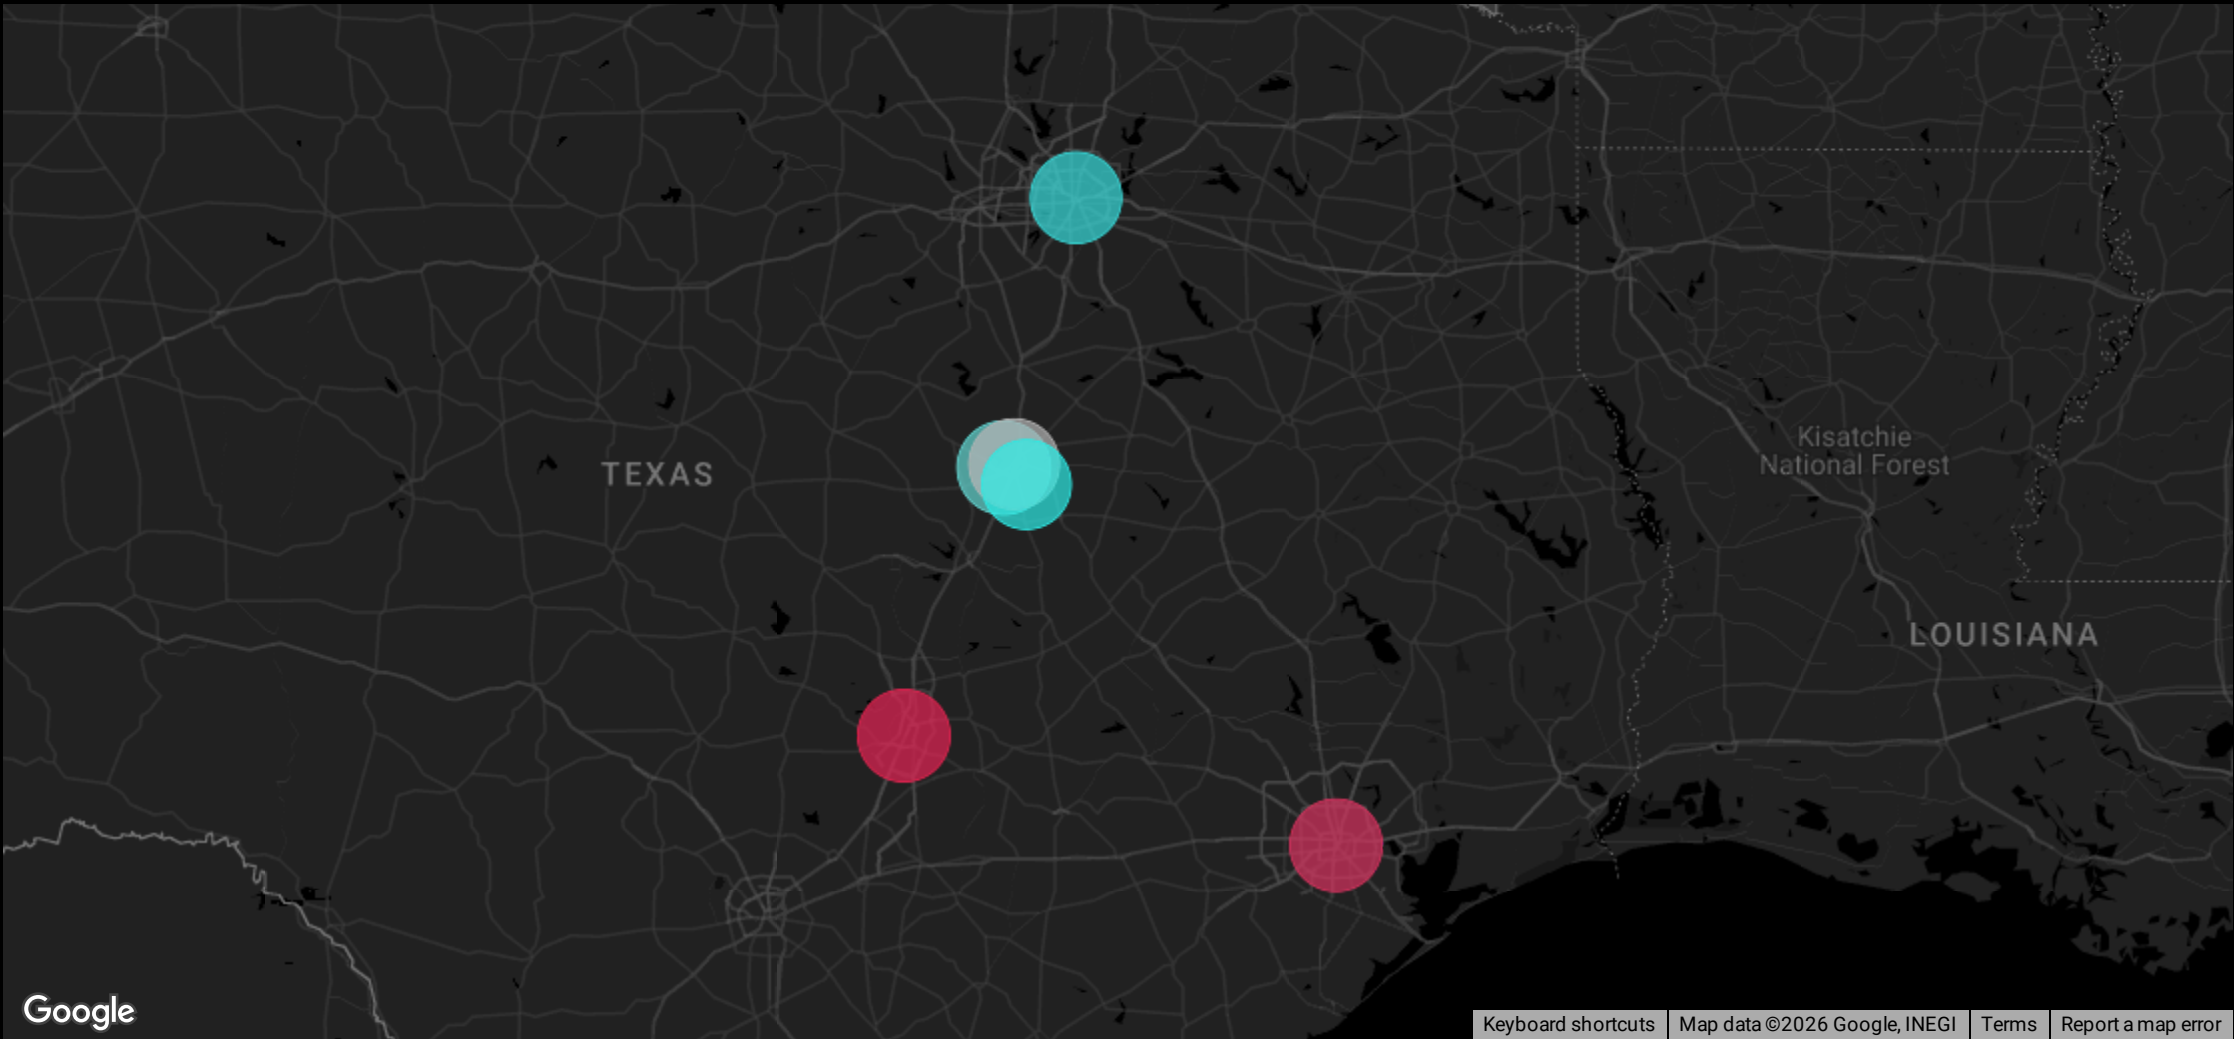

Linguistic Threat Density

1.0276

This KPI tracks the concentration of deceptive linguistic patterns in ad creatives, helping to identify evolving scam sophistication and policy evasion tactics.

Geo-Mapping Corridor Protection Area

Financial risk is heavily concentrated in Texas urban corridors like Waco (76710), where over \$1.7M in budget faces a consistent 3.4% scam rate. These high-density "Protection Areas" require prioritized localized audit sweeps and regional verification strategies to mitigate standardized deceptive activity.

Ecosystem Scam Rate

3.30%  3.55%

Total Ad Capital Exposure

\$10.01M

This KPI quantifies the total advertiser capital at risk due to fraudulent activities, highlighting the direct financial impact of ad fraud and policy violations.

Ecosystem Scam Rate

3.44%

This metric reveals the percentage of the ad ecosystem compromised by scams, indicating the overall health of ad moderation and policy enforcement.

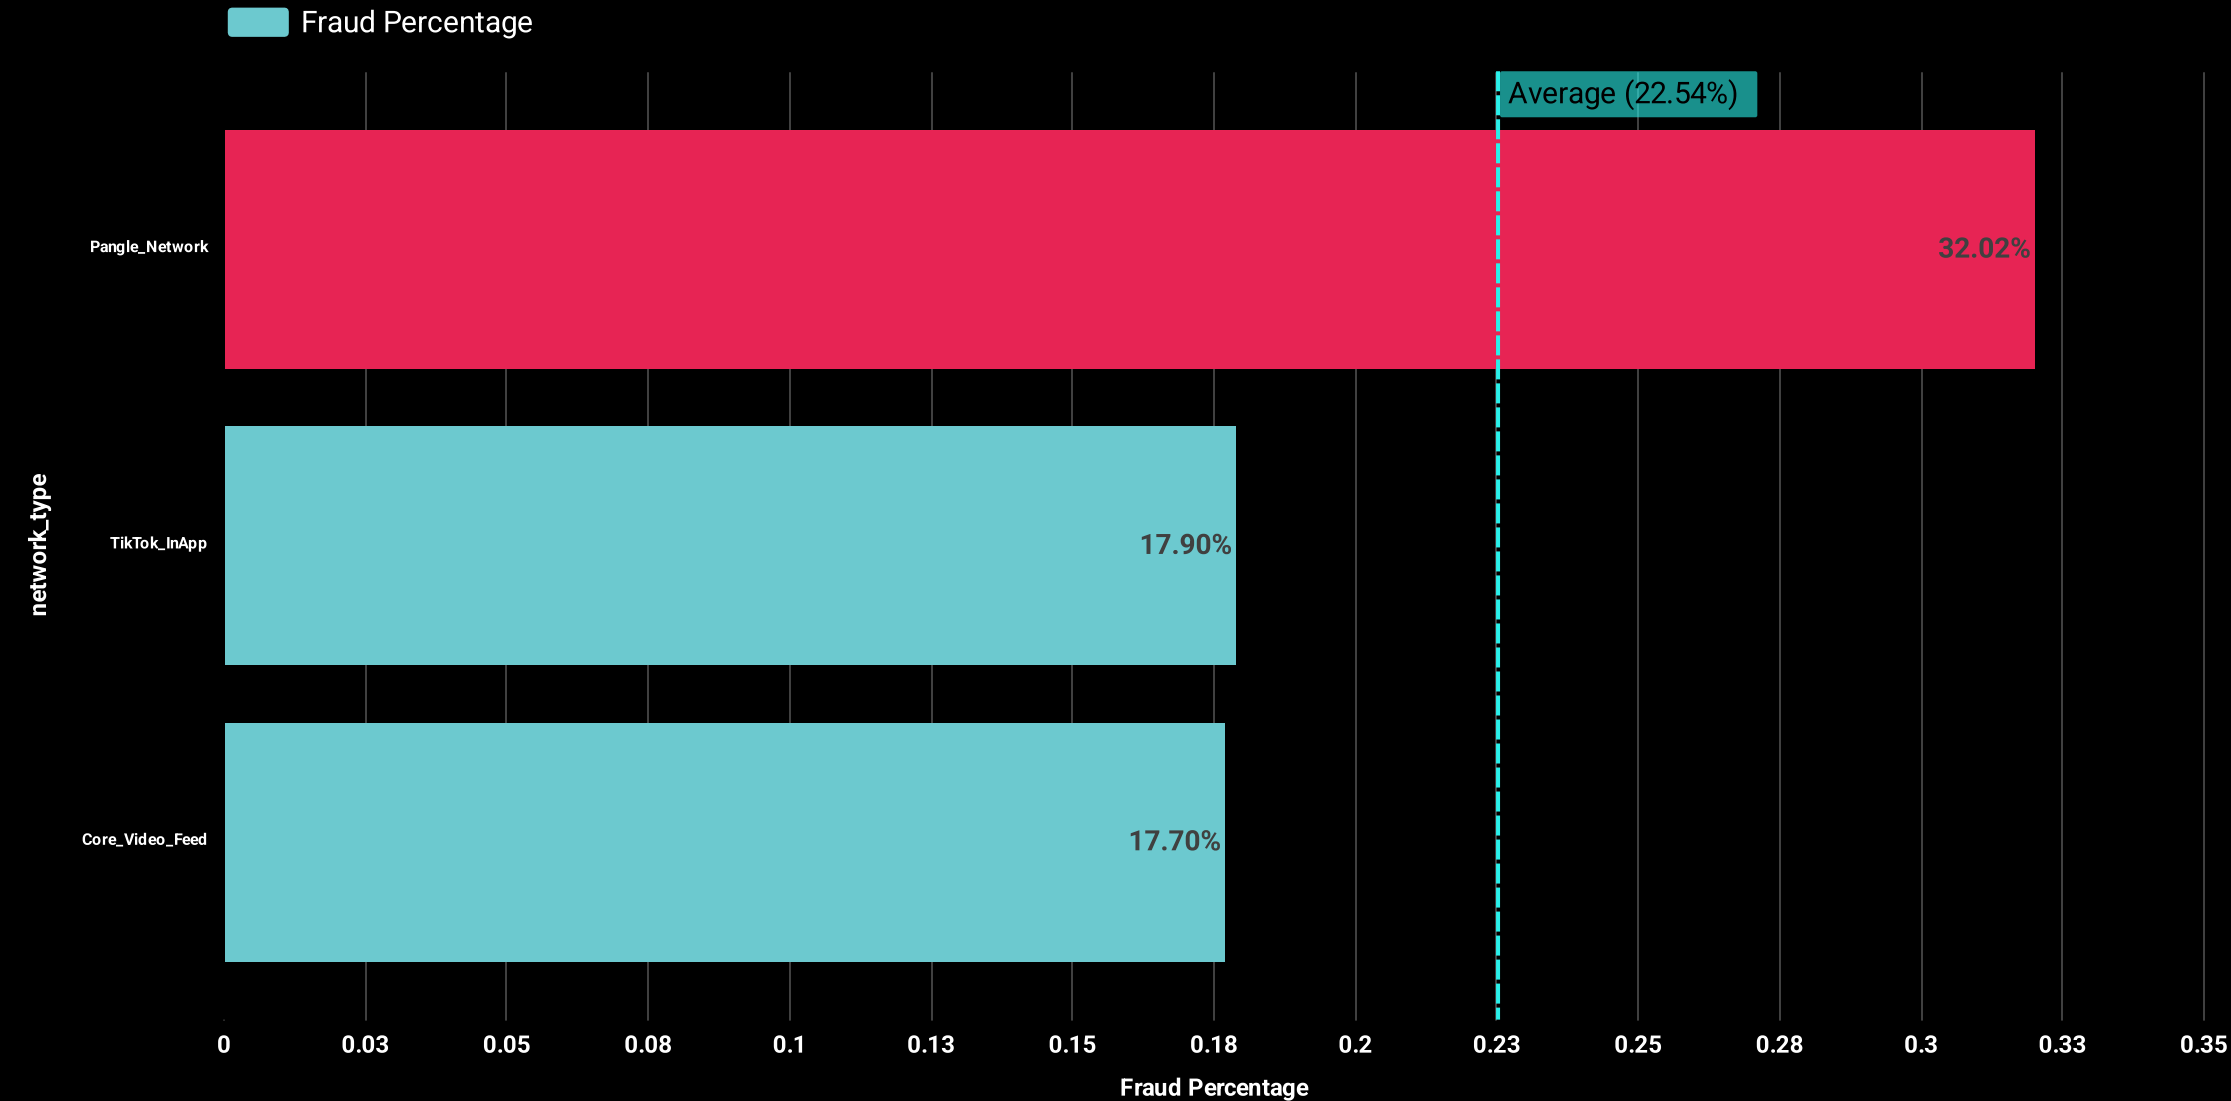

Linguistic Threat Density

1.0276

This KPI tracks the concentration of deceptive linguistic patterns in ad creatives, helping to identify evolving scam sophistication and policy evasion tactics.

Network Fraud Metric Attributions

Pangle Network's 32% fraud rate nearly doubles first-party baselines, identifying it as the ecosystem's primary risk vector requiring immediate, prioritized auditing to mitigate regulatory exposure.

Total Ad Capital Exposure

Ecosystem Scam Rate

Linguistic Threat Density

\$10.01M

This KPI quantifies the total advertiser capital at risk due to fraudulent activities, highlighting the direct financial impact of ad fraud and policy violations.

3.44%

This metric reveals the percentage of the ad ecosystem compromised by scams, indicating the overall health of ad moderation and policy enforcement.

1.0276

This KPI tracks the concentration of deceptive linguistic patterns in ad creatives, helping to identify evolving scam sophistication and policy evasion tactics.

Regulatory Compliance and Threat Account Ledger Detailed Matrix

Concentrated financial liability in EU Tier-1 VLOPs and critical 100% scam rates for US-based AI deceptive ads demand immediate escalation to prevent 6% revenue fines.
